Resilient Reliability Joins the eMaint Partner Network to Help U.S. Manufacturers Turn Reliability Strategy into Measurable Results

Founded by a maintenance manager who selected and implemented eMaint firsthand, the Midland, Texas consultancy will resell and implement eMaint X5 for food and beverage, medical, automotive, fabrication, semiconductor, and early-stage manufacturers

MIDLAND, Texas September 14, 2026 Resilient Reliability, a consulting firm specializing in CMMS implementation and reliability programs for manufacturers, today announced that it has joined the eMaint Partner Network as a Reseller and Delivery partner. Resilient Reliability will resell eMaint, the computerized maintenance management (CMMS) and enterprise asset management (EAM) platform from Fluke, and deliver implementation, reliability program development, and workforce enablement services to manufacturers across the United States.

The partnership has its roots on the plant floor. As a maintenance manager, Resilient Reliability founder Vernon “Drew” Welch led an extensive search for the right maintenance software, selected eMaint X4, and ran his first CMMS implementation on it. Welch has since completed eMaint partner enablement and now brings that practitioner experience to manufacturers adopting eMaint X5, the current generation of the platform.

Many manufacturers still run maintenance on paper work orders, spreadsheets, or aging systems that do not connect. The result is reactive maintenance, limited visibility into asset health, and audit preparation that pulls teams away from the work. Resilient Reliability addresses the people and process side of that challenge. eMaint provides the platform: work order and preventive maintenance management, mobile access for technicians, parts and inventory control, analytics and reporting, and integration with Fluke condition monitoring sensors for teams moving toward predictive maintenance. For regulated manufacturers in

segments such as food and beverage and medical manufacturing, eMaint also provides audit trails and electronic signatures that support compliance.

Manufacturers working with Resilient Reliability and eMaint can expect:

- **Practitioner-led implementation:** Configuration and rollout guided by consultants who have run maintenance departments, not just software projects.
- **A reliability program, not just a system:** Reliability program development and change management that make the CMMS reflect how the plant actually runs.
- **Adoption that lasts:** Workforce enablement that helps technicians and planners use the system every day, which is where uptime gains are sustained.
- **Room to grow:** A scalable cloud platform that supports single-site and multi-site operations, with a path to condition monitoring and predictive maintenance through Fluke sensors.

> "Reliability is a journey, and it starts with a single step. I learned that firsthand as a maintenance manager, when eMaint X4 was the first CMMS I ever implemented. I have been a fan of the product ever since, and the path forward with X5 is even brighter," said **Drew Welch, Founder, Resilient Reliability**. "Partnering with eMaint lets us combine real-world maintenance and reliability expertise with a proven platform, so our customers see measurable progress from our very first conversation and keep building on it for years to come."
>
> "The best partners understand the work our customers do every day, and Drew has lived it. He chose eMaint as a maintenance manager, ran it on the plant floor, and knows what it takes to make a CMMS stick," said **Paraic O'Lochlainn, Global Vice President Sales, eMaint**. "Pairing Resilient Reliability's hands-on implementation depth with eMaint X5 gives manufacturers a faster, more practical path from rollout to sustained gains in uptime and asset performance."

Resilient Reliability is listed in the eMaint Partner Locator, where manufacturers can find resellers, delivery partners, and technology partners that extend eMaint's reach and expertise. About Resilient Reliability

Resilient Reliability is a consulting firm specializing in CMMS implementation and best-practice reliability programs for manufacturers. Its implementation leads and reliability professionals bring decades of hands-on maintenance management and engineering experience from manufacturing environments. Headquartered in Midland, Texas, the firm serves manufacturers across the United States in food and beverage, medical manufacturing,

automotive (Tier 1 and Tier 2 suppliers), fabrication, semiconductor, and early-stage manufacturing, supporting clients from platform configuration through continuous improvement. Learn more at resilient-reliability.com.

About eMaint

eMaint, a Fluke brand, provides computerized maintenance management (CMMS) and enterprise asset management (EAM) software that helps maintenance and reliability teams improve asset reliability, streamline operations, and maximize equipment uptime. Delivering maintenance software since 1986, eMaint is trusted by more than 150,000 users in 116 countries and supports more than 7,400 customer deployments, from single-site facilities to global Fortune 500 operations. eMaint X5 pairs work order, preventive maintenance, mobile, inventory, and analytics capabilities with integration to Fluke condition monitoring tools. Learn more at www.emaint.com. Fluke Corporation is a subsidiary of Fortive Corporation.
